# Active License SeDiv

Complete guide — send a .lic file and receive the activated .src

Audience: SeDiv VIP members · English

This guide explains the full **Active License SeDiv** workflow on the HDD Land forum: choosing the correct product, uploading a **.lic** file, tracking the Message Center ticket, and downloading the activated **.src** return.

Official portal: <https://forum.hdd-land.com/> · Desk: [/vbdlmanager/sediv\\_active\\_license.php](#)

## 1. Who can use this menu

Active License SeDiv is available only to members of the **VIP SeDiv** group. If you do not see the menu, complete a **License Request** first and wait until an administrator adds VIP SeDiv to your account.

- VIP users send licenses themselves from the desk.
- Support staff can review every ticket in Message Center.
- Mail is always sent from [info@hdd-land.com](mailto:info@hdd-land.com) to [sedivlic@list.ru](mailto:sedivlic@list.ru).

## 2. Open the Active License SeDiv desk

### Step 1 — Sign in as VIP

Sign in at <https://forum.hdd-land.com/> with your VIP SeDiv account.

### Step 2 — Open the desk

From Message Center open **active license sediv**, or go directly to the desk URL. You should see the product list, upload field, and your ticket history.

Figure 1. HDD Land Company — Active License SeDiv desk

### 3. Choose the correct license type

Each product uses an exact email subject that the activator recognizes. Select the matching radio button before you upload the file.

| License type                  | Exact email subject               |
|-------------------------------|-----------------------------------|
| All license SeDiv imager      | Subject license SeDiv imager      |
| All license SeHitachi imager  | Subject license SeHitachi imager  |
| All license SeDivX imager     | Subject license SeDivX imager     |
| All license SeHGST imager     | Subject license SeHGST imager     |
| All license SeDiv repairs     | Subject license SeDiv repairs     |
| All license SeHitachi repairs | Subject license SeHitachi repairs |

The desk preview updates the Subject line when you change the selected type. The system then appends your tracking token: **Subject license ... [VBDL-LIC-...]**.

### 4. Send the .lic file

#### Step 3 — Upload .lic

Choose your license file. Only .lic files are accepted.

#### Step 4 — Optional note

Add a short note if needed (device serial, urgency, or related ticket). The note is included in the outbound email body.

## Step 5 — Press Send license

When you send, HDD Land automatically:

- Opens a Message Center ticket shared with you and support
- Attaches your **.lic** to the ticket
- Creates tracking token **VBDL-LIC-XXXXXXXXXXXX**
- Emails sedivlic@list.ru from info@hdd-land.com with Message-ID + X-VBDL-Token headers
- Shows a success link to the new ticket

**Tip:** You may send several license types the same day. Each send creates its own token and ticket — never mix files between tickets.

## 5. Receive the activated .src

Figure 2. Active License SeDiv send → activate → return flow

When the activator replies, the forum inbox poller matches the reply to your ticket using this priority:

- X-VBDL-Token header / In-Reply-To Message-ID
- Token in the email subject
- Token in the email body
- Exact product subject — only if exactly one open ticket matches

## Step 6 — Refresh your ticket list

On the desk, open **Your license tickets** and press Refresh. Status values:

- **sent** — emailed; waiting for activator
- **returned** — activated **.src** attached to the Message Center ticket
- **rejected** — text reply only (activation failed / instructions). Read the ticket text.
- **error** — rare system failure; contact support with the token

## Step 7 — Download Source.src

Open the Message Center ticket. Download the **.src** attachment and use it in SeDiv for the matching product. Keep the token if you need support later.

Figure 3. Example ticket with .lic sent and .src returned

## 6. If activation fails (rejected)

If the activator cannot activate the file, a plain-text reply is posted into your ticket and status becomes **rejected**. Automatic acknowledgment messages are ignored and will not mark your ticket rejected. Read the activator message carefully, fix the license/source issue, then send a **new** request with a new .lic.

## 7. Retention and downloads

- Returned **.src** files remain available for download for a limited retention window (default 7 days).
- After retention, the binary may be purged while the ticket history and filename remain visible.
- Download your **.src** promptly after status becomes **returned**.

## 8. Accuracy rules for multi-license days

On busy days many licenses share the same product subject. Always rely on the token.

- One .lic file → one Send → one VBDL-LIC token → one ticket
- Do not rename or strip the token from subjects when forwarding
- If you manually return a file for staff, paste the exact token with the **.src**
- Quote the full token in any support conversation

## 9. Quick checklist

- VIP SeDiv membership confirmed
- Opened Active License SeDiv desk
- Selected the correct product type / subject
- Uploaded the matching .lic file

- Pressed Send license and saved VBDL-LIC token
- Opened Message Center ticket
- Waited until status = returned
- Downloaded Source.src and used it in SeDiv

**Need help?** Open the ticket in Message Center or email [info@hdd-land.com](mailto:info@hdd-land.com) with your VBDL-LIC token.
